

When submitting your samples for sequencing in a 96-well plate please aliquot your samples according to the diagram below. Sample numbers 1 through 8 will go into wells A1 through H1, samples 9 through 16 will go into wells A2 through H2, etc. Our ABI 3730 sequencer only accepts this format so please be sure you have it correct. Please write your name on the plate and then cover your plate with a foil or plastic cover and write your name and order number on the cover.
